PROFESSIONAL SUMMARY

Fourth-year Information Technology Engineering student with hands-on experience in backend development, Python programming, and MySQL database design. Skilled in building AI-driven solutions using NLP libraries, with hands-on experience developing cloud automation tools using AWS S3, and a strong foundation in Data Structures, Algorithms, and Object-Oriented Programming. Seeking a Backend Developer / Software Engineering internship to apply technical skills in a real-world engineering environment.

TECHNICAL SKILLS

Programming Languages: C, C++, Python, SQL (MySQL), JavaScript, HTML/CSS

Frameworks & Libraries: Flask, Bootstrap, Jinja2, scikit-learn, Sentence-Transformers, Hugging Face Transformers, PyTorch, Google Gemini API, Web3Forms API, Boto3, Click, PyYAML, Requests

Databases & Tools: MySQL, Git, GitHub, VS Code, Amazon S3, AWS, PyPDF2, python-docx, ReportLab, Waitress, llama.cpp, Docker, Docker Compose, GitHub Actions, Vite

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems (DBMS), REST API Fundamentals, Cloud Storage & Backup Automation, CLI Application Development, CI/CD & Containerization, Automated Testing

EDUCATION

B.Tech in Information Technology Engineering, Marathwada Mitra Mandal College of Engineering 2023 – Present

GPA: 7.09 / 10 (through 6th Semester)

Higher Secondary Certificate (XII), Science – Prakash College of Science

2022

Score: 68.33%

Secondary School Certificate (SSC) – Himalaya High School

2020

Score: 84.00%

EXPERIENCE

Web Developer Intern – Primathink Pvt. Ltd.

45 Days

- Developed and styled responsive web pages using HTML, CSS, and modern CSS frameworks, translating design requirements into functional front-end interfaces.
- Built interactive web-page features using JavaScript, improving usability and user engagement.
- Completed the internship with a certificate of completion, gaining practical exposure to front-end web development workflows.

PROJECTS

ResumeIQ – ATS Resume Evaluator

- Engineered a deterministic ATS scoring engine (Flask, Python) using a weighted 50/30/20 formula across skill-taxonomy matching (14+ domains), hybrid TF-IDF + SentenceTransformer semantic similarity, and experience/education alignment.
- Built an optional AI enhancement layer for non-hallucinated resume-bullet optimization and JD parsing, running a local Qwen2.5 GGUF model via llama-cpp-python with a Google Gemini API fallback.
- Built a responsive Bootstrap 5 dashboard with prioritized gap-analysis roadmaps and ReportLab PDF reports; containerized with Docker/Docker Compose and deployed on Render via Waitress, backed by a 163-test GitHub Actions CI suite.

Backup For You – Cloud Backup Automation Tool

- Built a modular, open-source Python CLI tool (packaged with pyproject.toml) that automates compression, rotation, and upload of file backups to Amazon S3 and other S3-compatible storage services.
- Implemented YAML-based configuration, dry-run mode, detailed logging, backup retention/rotation policies, and Slack/Discord webhook notifications using Boto3, Click, and Requests.

GitHub: github.com/Vitthal434/backup_for_you

ACHIEVEMENTS

- Smart India Hackathon (SIH) 2025: Cleared the internal college hackathon at MMCOE and was selected as a top team to represent the college at the national-level competition.
